FAQ

Q). How do I Import the asset?

A). Go to the Unity asset store and visit your "**My Assets**". Download the asset if not already downloaded and click "**Import**", import all required features of the asset for your use. It should have appeared in your project under "**Combination / Padlock System**". (If Unity warns you that you may overwrite project data, do not choose the "**Project Settings**" tickbox when importing the asset)

Q). Is there an example of this asset working?

A). Yes, you can open the "**PadlockDemo**" to see the padlock asset in action or use this scene as your initial base of your project.

Q). How can I manually setup this asset?

A). See the manual setup instructions on "Page 2".

Q). How can I use a different Character Controller with the padlock system?

A). Check the "Extending the padlock system".

Q). How can I add more than one padlock set to my scene?

A). Check the "Extending the padlock system".

Q). How do I change the material of the padlock?

A). Check the "Extending the padlock system".

Q). Can I use this asset with a 3rd person character with this asset?

A). Yes, all you need is to use the trigger event and add the "**PadlockTrigger**". See additional note for details!

Q). My Raycast isn't working properly?

A). Make sure your player character (If it has a collider) uses a layer of "Ignore Raycast" to help this!

Manual Setup – Initial #1

PLEASE SEE THE ONLINE DOCUMENTATION FOR UPTO DATE SETUP, VIDEOS AND MORE! IF YOU NEED MORE HELP: https://speedtutoruk.gitbook.io/padlock-system-doc/

NOTE QUICK START: You can add the Entire_Padlock_DemoScene prefab to your scene to get everything setup and ready to go without having to follow any extra steps.

1). Make sure to create a Layer in the top right of the inspector called **PadlockSpinner**
2). Open up the Padlock Spawnable Objects in the prefabs folder and set the spinners to this layer
3). Make sure your main camera has a **Physics Raycaster** script and set the **EventMask** to **PadlockSpinner** too

4). Add the **FPSController** prefab from the **Prefabs** folder to your scene. (You can drag this into the hierarchy or the main scene.) Please navigate to the scripts folder and add the **PadlockInteractor** script to your **MainCamera**. (If not already).

- Set your **MainCamera** to the tag of **MainCamera**
- Set the **FPSController**s layer to **Ignore Raycast**
- Make sure the **Main Camera** has a **Physics Raycaster** script with the layer of **PadlockSpinner** in the EventMask

5). Add **PadlockTrigger / Padlock Raycast** sets to your hierarchy or scene from the assets **Prefabs** folder. Add this asset wherever you want in your scene.

- Make sure your **Padlock_Interactable** GameObject has a:
  - **Box Collider**
  - **PadlockItem** script should already be on the prefab. If not, add it from the "Scripts" folder.

6). Open the **Padlock Spawnable** objects from the prefabs folder and each spinner should be setup as below:

- Make sure to add the **PadlockNumberSelector** script – Set the row according to it's row
- **Box Collider**
- **Rigidbody**
- Set the Layer to **PadlockSpinner**

7). Select **Padlock_Controller** object if not already added from the combined prefabs to your project, which will have the **PadlockController** script added

8). Make sure to add the managers from the prefabs folder:

- **DisableManager** - Add the Player object and the main camera to these slots to find the appropriate reference
- **AudioManager** - Add all of the appropriate ScriptableObject audio effects from the scriptableobjects folder
- **UIManager** - This UI manager will have the canvas for all UI elements parented and you should add the correct UI elements to the slots in the manager.

Final Notes

REFERENCING THE AUDIO MANAGER:

1). If you click on the audio manager you can add addition elements to the array by incrementing the value by as many sound clips as you want to add, make sure to give them a name you will remember as you will reference this in your code!

2). Use the code, within your scripts to reference your sounds to play!
PLAudioManager.instance.Play(ScriptableObjectsName);

ADDING A TRIGGER EVENT – Using PadlockTrigger script for 3rd person Controllers

1). Create a box or other 3D Object, make sure this object has a collider set to **IsTrigger**

2). Add the **PadlockTrigger** script to that 3D object and add the keypad object to the inspector slot named **PadlockController**

3). Then set an input key you'd like to use for the interaction, by default set to "E"!

Remember to take a look at the demo scene if you have any troubles, it might give you an idea on how to fix an issue!

If you find the package helpful, please leave a positive review and star rating as it would really help me out! ☺ If you have any problems, feel free to send an email to me!

Extending the Padlock System

I want to do something different when the code is valid:

In the padlock controller script object, this uses **UnityEvents** which allows you to click the **+** icon in the bottom right and then add your own objects with a script with a public method. I have an example in the demo scene, which uses the door object with the **DoorAnimation** script.

How to add another padlock set to the same scene?

Duplicate the **Padlock_Interactable** and **Padlock_Controller** from your scene and increment the numbers like I mentioned in the Final Notes section.

I want to change the material on the padlock to the alternative, how do I do this?

Visit the **Materials** folder of the package and look for the folder named **M_Padlock_Black** and open the folder. Add the **M_Padlock_Spinner_Black** to each of your spinners and the **M_Padlock_Main_Black** to the main body and metal latch of the interact able object and mechanism that resides on your camera or add the prefabs to your scene!

How do I use another controller with this system?

In the **DisableManager** script we reference the player controller so we can disable the **FirstPersonController** script so when we interact with the padlock we disable character movement and camera rotation. If you're using a different controller please replace these lines with appropriate for you.

```
namespace PadlockSystem
{
    Unity Script | 4 references
    public class PLDisableManager : MonoBehaviour
    {
        [SerializeField] private FirstPersonController player = null;
        [SerializeField] private PadlockInteractor mainCameraInteractor = null;

        public static PLDisableManager instance;

        Unity Message | 0 references
        void Awake()
        {
            if (instance != null) { Destroy(gameObject); }
            else { instance = this; DontDestroyOnLoad(gameObject); }
        }

        3 references
        public void DisablePlayer(bool disable)
        {
            if (disable)
            {
                player.enabled = false;
                mainCameraInteractor.enabled = false;
                PLUIManager.instance.DisableCrosshair(true);
            }

            else
            {
                player.enabled = true;
                mainCameraInteractor.enabled = true;
                PLUIManager.instance.DisableCrosshair(false);
            }
        }
    }
}
```
